Sydney Rain

This chart looks at how much rain falls each month in Sydney. Each dot is the total rainfall for a month, measured at SydneyBotanic Gardens from January 1885 until May 2024. The brighter the shape is, the higher the average rainfall is for that month. The length of the shape shows how high monthly rainfall has ever been. The shorter, wider shapes show months that have had consistently lower rainfall over the years. The wetest year in Sydney was in 1950 (total of 2243mm of rain) and the dryest was in 2000 (only 353mm of rain).

	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
