

This is an illustration of 1,063 plants classed as *Magnoliopsida* that are threatened. They are a class of flowering plants that includes Wattles, Banksias, and Wax Flowers.

This diagram shows individual species grouped up into their families, and breaks them into their threatened status. The length of the 'stem' relates to to the number of species in each family in total, and the size of the bubble is the number of species in that family of *Magnoliopsida* in each threatened group.

Magnoliopsida

Number of species in each family/threatened secies group
